Advanced Installer
100+ Improvements in 2026. And It's October.

PacKit **FREE FOR 1 YEAR WITH EVERY ARCHITECT PURCHASE**

Move from MECM to Intune Without Rebuilding Your Apps

PacKit **connects** directly to your **MECM** environment, **imports** your existing applications, and **carries over** their commands, detection rules, and package information into an **Intune-ready workspace**.

No app rebuilds. No scripting. No starting over.

Package with Advanced Installer.
Patch & deploy with PacKit.

Learn more: advancedinstaller.com/packit

Advanced Installer is our first choice for packaging software because their solutions empower our teams to deliver efficiently and with high quality.

We've found their interface to be easy-to-use, the support documentation robust, and they are always there to support us when we need them.

With the constant evolution of the MSIX format, we are happy to have chosen a software provider that is not just keeping pace, but leading the pack.

Nathan Coulling
Senior Director
avanade

As a leading supplier of ETRM applications, Amphora has standardized on the use of Advanced Installer company-wide. Since implementing a set of automated installers, our deployment landscape has changed entirely!

A single person running the installers can now accomplish on a 5 server system in less than 2 hours what originally took 3 people 3-5 days to accomplish. The need to edit countless configuration files across multiple servers is gone.

Advanced Installer Reads and Writes Open Package Manifest [OPM] v24.0

Deployment information belongs with the application.

Reuse install commands, detection rules, requirements, and assignments in one version-controlled folder, right next to your installer.

It works with Intune, MECM, WinGet & CI/CD pipelines.
github.com/Caphyon/Open-Package-Manifest

Instant Help

Integrated AI Assistant v24.0

Ask it where a setting is, how something works, or make approved changes to your project without leaving the application.

Spend **less time searching** and **more time packaging.**

New MSIX FixUps

Open Any MSIX. Detect What's Missing. Fix It With MSIX Editor. v24.0

Open any MSIX package and let Advanced Installer Enterprise detect missing resources:

- File Type Associations
- Environment Variables
- Application Execution Aliases
- Shortcuts

50+ MSIX fixups. Rare corner cases included.

Faster Setup

Use the WinGet Catalog as Your Prerequisite Library v23.7

Search **WinGet** packages directly in Advanced Installer and add them as prerequisites. Reduce manual downloads, hosting, and maintenance.

New Add-On

Manage Your Entire Update Publishing Process From the Updater Cloud. v24.0

Build and publish your EXE and MSI updates directly from Advanced Installer, and **host** them **securely** in **Updater Cloud**.

Centralized team access. **30-day free trial available.**

Security Features

Stronger Signing & Certificate Validation

Keep your signing workflow resilient as certificates change.

2026 adds stronger certificate validation and signing visibility, including:

- Dedicated signing audit log v24.0
- Durable EKU checking v23.9
- Digital signatures for Updates Configuration v23.8

Choose the Advanced Installer Edition That Fits Your Workflow

Professional
